

Job Description

Job Title: Senior Software Engineer

Reporting structure

Team Leader: Lead Software Engineer

Supervisor of Record: Engineering Manager

Purpose:-

Contribute to the design, development, testing and support of products within the Engineering Team. In particular, to develop and apply skills in embedded and application software engineering.

Responsibilities:-

1. Interpret requirement specifications and to propose cost effective software solutions exploiting existing ESL technology and identifying and minimising where new designs are required.
 2. Design, develop, integrate and verify high level (PC applications) and low level (embedded systems) software in response to specific requirements using tools and concepts common to other ESL products where appropriate.
 3. Support products throughout their lifetime and provide assistance to Product Authorities when required on technical issues.
 4. Provide support to programmes on technical decisions, programme status and estimating at project reviews.
 5. Work towards the collective growth and improvement of the Engineering Department and its working practices.
